SUMMARY

Software engineering candidate transitioning from Python- and data-focused development into Java-based machine and ATM software development. Hands-on with Python, SQL, Django/REST concepts, data processing and visualization, with project experience in smart energy meter simulation, vendor performance analysis, and e-commerce analysis. Building Core Java, OOP, collections, exception handling, multithreading, JDBC, REST APIs and Spring Boot skills. Interested in software applications involving device integration, databases, middleware, monitoring, troubleshooting and production systems.

TECHNICAL SKILLS

Programming:	Java, Python, SQL
Java:	Core Java, OOP, Exception Handling, Multithreading concepts, JDBC
Backend:	Django, REST API concepts, Spring Boot fundamentals, API integration
Database:	MySQL, CRUD, Joins, Subqueries, Transactions, Indexes, Relations
Data & Analytics:	Pandas, NumPy, Power BI, Data Cleaning, Data Analysis, Data Visualization
Tools:	Git, GitHub, VS Code, Jupyter Notebook, OpenCode
Domain Focus:	Hardware-software integration concepts, device data handling, monitoring, troubleshooting, real-time data processing

PROJECTS

Smart Energy Meter Simulation & Monitoring Platform

- Developed a Python-based simulation workflow for structured meter data generation, processing and monitoring.
- Implemented data handling and analysis logic to identify abnormal readings and support anomaly detection and reporting.
- Worked with real-time data-processing concepts, multithreading and industrial communication concepts relevant to machine/device software.
- Created dashboard-oriented outputs to monitor operational trends and support troubleshooting.

Vendor Performance Analysis | Python / Pandas / SQL

- Cleaned, transformed and analyzed vendor and operational data to identify performance trends, bottlenecks and key business metrics.
- Used Python, Pandas and SQL-based analysis with visual reporting to convert raw data into actionable insights.
- Applied structured problem-solving and data validation techniques applicable to production support and software troubleshooting.

E-commerce Analysis | Python / SQL

- Analyzed order, sales and customer data using SQL and Python to generate KPIs and identify business patterns.
- Performed data cleaning and aggregation and presented findings through clear visual summaries.

TRAINING & ACHIEVEMENTS

- R CAT AI/ML Engineer Training Entrance Selection
- Deloitte Data Analytics Simulation | Deloitte | 2025
- Completed 10+ technical and data-focused projects / practice implementations

RELEVANT LEARNING FOCUS

- Core Java for machine/software development: OOP, Collections, Exceptions, Multithreading and JDBC.
- Backend development: REST APIs, Spring Boot fundamentals, database integration and application troubleshooting.
- ATM / device-software concepts: transaction flow, device interfaces, middleware, remote monitoring and fault handling.

EDUCATION

BCA | Rajasthan University | 2025

MCA | Rajasthan University | Pursuing
